NAAC ACCREDITED 'A++' GRADE COLLEGE

The workshop began with an interesting honey tasting session where the participants got a chance to taste about six different types of honey. They also learned about the different types of honey bees, their roles within the colony, and their impact on agriculture and the environment. Later participants were introduced to the stages of the queen bee's life cycle, from egg to larva to pupa and finally to the mature queen and about her primary role in laying eggs, secreting pheromones that regulate colony cohesion, and engaging in mating flights. The complex dynamics between the queen, worker bees, and drones were explored. Participants had the opportunity for hands-on learning. They practised inspecting hive frames, identifying queen bees, and handling beekeeping equipment.

Honey Bee & Honey Workshop proved to be a comprehensive and engaging learning experience for participants. Attendees left with a solid understanding of honey bee biology, beekeeping practices and also fostered a deeper appreciation for the vital role honey bees play in our ecosystem.
